ROBERTA MATERA

Software Engineer

materaroberta11@gmail.com | (+39) 3460508045 | https://www.linkedin.com/in/roberta-matera/ | Switzterland

Core Skills Angular, React, Next.js, RxJS, Redux, TypeScript, JavaScript, HTML5, CSS3, Sass, Angular Material, Material UI, Ant Design, PrimeNG, Bootstrap, Tailwind CSS, Flowbite, Storybook, Responsive & cross-browser design, Unit Testing (Vitest, Jasmine, Karma), REST APIs, Git, VS Code, IntelliJ, Scrum, Agile, Figma

Additional Technical Knowledge Java, Python, PHP, C, C++, Vue.js, Spring Boot, Laravel

AI-assisted Coding Claude, GitHub Copilot, Prompt Engineering, AI-assisted Coding, Debugging & Technical Brainstorming

Languages English C1 (IELTS), German A1 (currently studying), Italian (native)

Work Experience

Front-End Engineer, F1 Consulting (Milan – Remote)
May 2025 – Present

TOP NEWS & CHATBOT – Internal Supermarket Management Platform & AI-Powered Assistant

- Collaborate closely with **stakeholders and end users** throughout the **UX/UI design process**, gathering requirements and translating business needs into **mobile-first user experiences** for an internal platform used by supermarket partners to monitor and manage store performance, contributing to a **30% reduction in feature revision cycles**.
- Designed interactive **Figma prototypes**, validating solutions with users, and iterate on features based on continuous feedback, **accelerating design approval and feature delivery by 25%**.
- Developed and maintained **Angular** front-end features, including **Progressive Web App** (**PWA**) capabilities and **custom client-specific solutions** tailored to operational workflows, improving **mobile accessibility and user adoption by 20%**.
- Built responsive, reusable UI components and contribute to the evolution of the design system, reducing UI development effort and design inconsistencies by 35%**.**
- Implemented **unit testing coverage using Vitest** for critical UI flows and components, strengthening application reliability and supporting safer feature releases.

WEB APP / ADMIN PORTAL – Car Insurance Mobile & Management Applications

- Designed and developed interactive **mobile-first mockups** in collaboration with **clients**, enabling **insurance agents** to digitally assess vehicle damage and reducing **claims reporting errors by 40%**.
- Built a **responsive admin portal** integrated with the mobile application to streamline **request management**, improving **operational efficiency by 35%**.
- Served as the **sole Front-End Developer**, leading discussions with **stakeholders** to align requirements and accelerate **delivery timelines by 25%**.

PLANT APP – Food Enterprise Management System

- Optimized existing features by **code refactoring**, introducing reusable helper methods, and implementing **RxJS Observables**, improving **application performance and maintainability by 30%**.
- Resolved **critical bugs** and delivered new **client-requested features** following **business process analysis**, reducing **planning cycles by 20%**.
- Enhanced **application modularity and maintainability**, supporting **long-term scalability and future development**.

CROSS-FUNCTIONAL COLLABORATION & FRONT-END OWNERSHIP

- Acted as the **sole Front-End owner** across multiple projects, ensuring high-quality delivery and alignment with **client expectations**.
- Supported the **Project Manager** in team coordination and client communications, fostering smoother collaboration and reducing **project delivery delays by 20%**.

Front-End Engineer, Almaviva Digitaltech (Bari - Hybrid)

April 2023 - May 2025

ARTEA – Custom Front-End Library Development

- Spearheaded the development of a custom front-end library using React and Node.js by engineering **27 reusable, responsive, lazy-loaded components** integrated across **3 projects**. This streamlined the development process, reducing implementation time by **30%** and enhancing team productivity.
- Created comprehensive documentation and a sample project, reducing cross-functional knowledge transfer time by **50%**.
- Conducted bug fixing and code refactoring across the **three applications** where the library is used, improving application performance by **30%**.

GENIO – Management Application for European Call Handling

- Pioneered an Angular-based management application using **PrimeNG**, **REST APIs**, and **Apache ECharts** to replace a paper-based tracking system with a digital solution, reducing planning time by **60%**.
- Designed Figma prototypes for **UI standardization**, enhancing usability and reducing implementation time by **50%** in the long term.

OncologIA Project – AI-Driven Oncology Research Platform

- Collaborated on the development of a **micro-frontend module** for a medical research platform leveraging **predictive AI** to enhance oncology treatment effectiveness and support doctors and patients throughout the treatment journey, resulting in a **75% reduction in planning time** for diagnosis and treatment processes, using Angular, PrimeNG, and REST APIs.
- Designed and refined user interfaces in Figma, improving usability for end users and increasing user reach by **15%**.
- Implemented **unit tests using Jasmine and Karma**, resulting in a **20% reduction in reported bugs**.

Front-End Engineer, NexumAI (Rome - Remote)
January 2023 - April 2023

WOPTA – Banking Application

- Upgraded a banking web application with a revamped GUI and new functionalities using React, delivering a seamless cross-device and cross-platform user experience, **increasing user traffic by 35%** and **reducing action completion time by 50%**.
- Diagnosed and resolved persistent **REST API**-related issues, resulting in a **15% reduction in application downtime** and ensuring higher reliability and availability for end users.
- Code refactoring that reduced technical debt by 20%, strengthened app's scalability and performance.

Sicily Region – Public Administration App

- Implemented a feature for citizen data management in a public administration web application using Angular, Flowbite, and Tailwind CSS, leading to a **30% increase in client engagement** by improving functionality and user interaction.

Front-End Engineer, Fides (Naples - Remote)
February 2022 - December 2023

Rinascente – High-Profile E-commerce platform

- Engineered a **Gift Christmas Card feature** with pixel-perfect UI components (React and SCSS), increasing traffic and purchases by an average of **40%**, enhancing engagement and improving customer retention.
- Fixed bugs to improve application performance by **10%**, ensuring a smoother and more fluid user experience.

Prada – High-Profile E-commerce platform

- Delivered customized, pixel-perfect, responsive UI components based on Figma designs (React and SCSS) for **payment and shipping features**, doubling web traffic and leading to an **18% increase in sales**.
- Resolved UX/UI inconsistencies and bugs, contributing to a **12% increase in customer conversion rates**.

Intesa – Bank Web App

- Refactored an Angular banking application using **Storybook** and **Material UI**, based on Figma components, improving code readability and reusability, resulting in a **20% improvement in application performance**.

Education

UX Design Institute (IxDF) – Ongoing Training
AI for Designers – IxDF
Focus on UX research, prototyping, and AI-assisted design workflows

UNIPEGASO Digital University – Bachelor's Degree in Information Technology for Digital Enterprises
August 2024 – Present – Expected graduation: June–July 2026 (all exams completed)

STRIVE SCHOOL – Front End Web Development Bootcamp
October 2021 – February 2022 (Berlin, Germany)

AULAB – Full Stack Web Development Bootcamp
January 2019 – March 2019 (Bari, Italy)

Polytechnic of Bari – MSc in Architecture
September 2008 – June 2017 (Bari, Italy)
